### ***Allowable Subject Matter***

2. Claims 19-26, 32-42 are allowed.

### ***Reasons for Allowance***

3. The following is an examiner's statement of reasons for allowance:

The prior art taken singly or in combination does not teach or suggest, a method for measuring a user established white point balancing multiple color channels of a color display

Art Unit: 2676

among other things, comprising: measuring with a sensor directed to the display the adjusted color white to obtain an updated white point of the display.

The closest prior art, McLaughlin et al. (U.S. Patent No. 5,739,809) teaches providing a reference for the color white on a surface; providing on the display at least the color white; adjusting the color channels of the display to change the color white on the display to visually match the reference, in which said adjusting step is carried out by the user to establish said visual match between said adjusted color of white on said display and said reference for the color white on said surface.

However, reference McLaughlin et al. does not teach measuring with a sensor directed to the display the adjusted color white to obtain an updated white point of the display.

### *Conclusion*
